

- In 2009, roundwood harvest in the Republic of Ireland was 2.421 M m<sup>3</sup>, 3% down on the 2008 level.
- A reduction in demand for sawn timber and for wood-based panels was the main reason for the reduced harvest.
- Sawmill output was 774,000 m<sup>3</sup>.
- Wood-based panel output was 709,000 m<sup>3</sup>.
- In 2009, sawn timber and wood-based panel exports were worth €198 million.
- Over the period 2007-2009, the volume of sawn timber exports increased by 48%.
- Between 2005 and 2009, the domestic use of wood biomass grew by 18% per annum.

## Woodflow and biomass use on the island of Ireland 2009

Gordon Knaggs<sup>1</sup> and Eoin O'Driscoll<sup>2</sup>

This COFORD Connects Note incorporates an analysis of woodflow for the island of Ireland, together with an analysis of wood biomass use. In previous years, these matters were dealt with in separate Notes.

### Republic of Ireland

Table 1: Roundwood available for processing (2007-2009) <sup>a</sup>.

<b>TOTAL</b>	<b>4,358</b>	<b>3,663</b>	<b>3,553</b>

<sup>a</sup> Wood biomass energy is used by the forest products sector for process drying, heating and for the generation of electricity.

In 2009, imports of forest products were €464 million, mainly pulp and paper (71%), with sawn timber and wood-based panels (WBP) making up the remainder. The reduction in Irish construction led to a collapse in sawn timber and WBP imports in 2008 and 2009<sup>5</sup> (Table 4). In 2009, WBP and sawn timber exports were worth €198 million. Key export markets were Northern Ireland, GB and the Benelux countries.

Ireland remains a net importer of forest products (Table 5), particularly paper and paperboard. However, over the 3-year period (2007-2009) sawn timber exports and imports moved close to parity, while Ireland's position as a substantial net exporter of wood-based panel products was sustained, albeit at a declining level. These data need to be taken in the context of a decline of over 50% in the domestic market for forest products due to the collapse in housing construction over the 2007-2009 period.

<sup>5</sup> EUROSTAT JFSQ (2008-2010).

<sup>6</sup> Includes the production of round stake.

Table 4: Timber trade (2007-2009)<sup>a,b,c</sup>.

The sawmilling sector produces mainly construction/structural timber, pallet/packaging timber and fencing products. In past years Irish structural timber was largely sold on the home market with pallet and fencing products making up the bulk of sawn timber exports. However, in recent years, Irish sawmillers have developed new products and markets such as: planed all over (PAO), eased-edge timber studding, fencing products and acoustic barriers.

The development of new products has required considerable investment in both sawmill processing facilities and in marketing and sales development in key export markets. In 2009, despite difficult market conditions, the exports of Irish sawn timber (in volume terms) increased by 45% over 2008 (Table 7). In recent years, structural/construction timber exports have increased significantly. These are largely sold in Northern Ireland and in the rest of the UK. Over the period 2000-2009, the volume of sawn softwood exported has increased by 205% (Table 7)<sup>7</sup>.

<sup>a</sup> UNECE JWEE (2008-2010).

<sup>b</sup> RWE: roundwood equivalent.

In 2009, 709,000 m<sup>3</sup> of WBP was produced from 1.29 million m<sup>3</sup> of wood fibre<sup>8</sup>. This was a 9% decline over 2008 and a 23% reduction over 2007 (Table 9). 82% of the WBP manufactured in the Republic of Ireland were exported (580,000 m<sup>3</sup> to a value of €147 million; Table 4). Exports were dominated by Oriented Strand Board (OSB) and Medium Density Fibreboard (MDF), which are manufactured by Masonite, Medite and by SmartPly. Key export markets for WBP are the UK and the Benelux countries. In 2009, the Irish WBP sector was the second largest exporter of particleboard and OSB to the UK and the largest exporter of MDF to the UK<sup>9</sup>.

## Woodflow for the Republic of Ireland (2009)

Woodflow for the Republic of Ireland (2009) is shown in Figure 1 overleaf.

### All island woodflow (2007-2009)

The woodflow for the island of Ireland for the period 2007 to 2009 is shown in Annex A. Over this period, the volume of roundwood processed declined from 3.84 M m<sup>3</sup> in 2007 to 3.14 M m<sup>3</sup> in 2009 (A1).

Sawnwood output over the same period declined from 1.54 M m<sup>3</sup> in 2007 to 1.17 M m<sup>3</sup> in 2009 (A2). WBP output declined from 1.03 M m<sup>3</sup> in 2007 to 0.71 M m<sup>3</sup> in 2009 (A5). This was driven by a decline in construction markets and by the closure of the Spanboard chipboard plant in Coleraine, Co Derry.

### Wood biomass energy use, policy drivers and markets (2007-2009)

The use of wood biomass energy is dominated by the forest products sector, where it is used for process drying and for energy purposes. Since 2007, the use of wood energy

by commercial and domestic users has risen considerably (Table 10). Between 2005 and 2009, the domestic use of wood biomass grew by 18% per annum<sup>10</sup>. The output of the wood biomass energy sector is shown in Table 11.

Table 11: Output of the wood biomass energy sector (2007-2009)<sup>a</sup>.

		2007	2008	2009
Heat	TJ	4,931	4,857	5,273

Tonnes CO <sub>2</sub> abated	000 tonnes	381	380	422

<sup>a</sup> UNECE JWEE (2008-2010).

Four million tonnes of milled peat are harvested each year in Ireland from over 20,000 ha of peatland<sup>11</sup>. The main markets are power generation, briquette manufacture and horticultural products. Around 3 million tonnes are used at three peat-fired power plants<sup>12</sup>, generate an annual electrical output of 378 MWe<sup>13</sup>, providing 6% of Ireland's total primary energy requirement (TPER). This process emits 2.8 million tonnes of carbon dioxide (CO<sub>2</sub>) per annum, accounting for 4.1% of Irish greenhouse gas (GHG) emissions<sup>14</sup>. Research has shown that co-firing of peat with wood biomass could reduce GHG emissions from peat burning power stations by up to 30%<sup>15</sup>.

Table 10: Wood biomass energy use (2007-2009)<sup>a</sup>.

In recent years, wood biomass energy systems have been promoted and developed for use in households and in medium-sized businesses by state agencies including COFORD (now part of the Department of Agriculture, Food and the Marine), the Forest Service, Teagasc and the Sustainable Energy Authority of Ireland (SEAI). These support schemes are outlined below.

#### Greener Homes Scheme (GHS)<sup>16</sup>

The GHS scheme allows householders to apply for grants to install renewable heat technologies including wood pellet stoves, biomass boilers, solar panels and geothermal heat pumps. By June 2010, 28,686 GHS applications had been approved. These have generated an energy saving of 265 GWh<sup>17</sup> and an annual GHG saving of 64,000 tonnes of CO<sub>2</sub><sup>18</sup>.

Table 14: Uptake of the GHS (2009-2010)<sup>a</sup>.

Biomass	23	20
Wood gasification		0.4

<sup>a</sup> Source: SEAI ; [www.seai.ie](http://www.seai.ie)

<sup>b</sup> Due to rounding, these numbers do not total 100%

#### ReHeat Programme<sup>19</sup>

This grant support scheme enabled community groups, commercial sector, public sector and industrial sector organisations in the Republic of Ireland to obtain grants for the installation of wood chip and wood pellet boilers. Grant aid was up to 30% of overall cost. By June 2010, 163 biomass projects had been completed, with a total output of 67.6 megawatts. The average biomass boiler installed had a heat capacity of 415 kW<sup>20</sup>.

In 2011, due to Government budget restrictions, the ReHeat programme was closed<sup>21</sup>.

<sup>16</sup> <http://www.seai.ie/Grants/GreenerHomes>

<sup>21</sup> [http://www.seai.ie/Grants/Renewable\\_Heat\\_Deployment\\_Programme/](http://www.seai.ie/Grants/Renewable_Heat_Deployment_Programme/)

### Renewable Energy Feed-In Tariff (REFIT)<sup>22</sup>

The REFIT scheme provides support to renewable energy projects over a 15-year period. The new support mechanism differ from the previous programme in that it operates as a fixed feed-in tariff mechanism rather than as a competitive tendering process. Applicants to REFIT must have planning permission and a grid connection offer for their project.

In May 2010, a revised set of REFIT tariffs for biomass combustion, anaerobic digestion (AD) and biomass fuelled CHP were announced by the Department of Communications, Energy and Natural Resources (SEAI)<sup>23</sup>. These will provide price support to assist the deployment of CHP systems which are fuelled by biomass (Table 15).

Table 15: REFIT tariffs under the new SEAI CHP/AD CHP schemes<sup>a</sup>.

	REFIT tariff €/MWh <sup>b</sup>
AD CHP ≤500 kW	150

<sup>b</sup> MWh: Megawatt hour

### Forest-based biomass and carbon emissions

Since 2006, the use of forest based biomass for energy generation in the Republic of Ireland has resulted in emissions savings of 1.54 million tonnes of carbon dioxide<sup>24</sup>.

### Meeting biomass energy targets

Over the period 1990-1995, renewable heat energy (RES-H) declined from 2.6% to 2.1%. Between 2000 and 2007 RES-H grew from 2.4% to 3.7% before falling back slightly in 2008 to 3.6%. The provisional RES-H figure for 2009 is 3.9%. The growth in renewable energy (dominated by biomass) is mostly due to increased capacity in the in the forest products and food sectors where it is mostly used. Recently there has also been growth in renewable energy use in the residential and services sectors with the introduction of grant support schemes. However, increases have been small in volume with respect to overall thermal renewable energy consumption. Against this backdrop, the short-term target of achieving a 5% renewable energy contribution to Ireland's thermal energy by 2010 is very challenging<sup>25</sup>.

In 2009, the share of electricity which was generated from renewable energy sources (RES-E) was 14.4%<sup>26</sup>. This means that Ireland has surpassed the EU interim target of 13.2% RES-E by 2010. Table 16 shows that Ireland is on track to meet the 15% RES-E target by 2010. A significant milestone in 2009 was that wind energy accounted for over 10% of gross electricity generation<sup>27</sup>.

Table 16: Renewable energy contribution to gross electricity consumption<sup>a</sup>.

	1990	1995	2000	2005	2006	2007	2008	2009

Over the period 2005-2009, the use of wood biomass energy has increased by 18% per annum. However, in 2009, wood biomass energy provided just 0.8% of Ireland's total primary energy requirement (TPER) (Table 17).

<sup>a</sup> [http://www.seai.ie/Publications/Statistics\\_Publications/Energy\\_in\\_Ireland/Energy\\_in\\_Ireland\\_1990-2009.pdf](http://www.seai.ie/Publications/Statistics_Publications/Energy_in_Ireland/Energy_in_Ireland_1990-2009.pdf)

## Abbreviations

The following abbreviations have been used in this COFORD Connects Note.

Abbreviation	Description
AD	Anaerobic digestion
BF	Boiler fuel
CHP	Combined heat & power
GHG	Green house gases
GHS	Greener homes scheme
GWh	Gigawatt hours
kW	Kilowatt
m <sup>3</sup>	Cubic metre
LPG	Liquid petroleum gas
MDF	Medium density fibreboard
MWe	Megawatt electricity
MWh	Megawatt hour
MWth	Megawatt thermal
NA	Not available
OB	Overbark
OSB	Oriented strand board
PAO	Planed all over
PB	Particleboard/Chipboard
PCRW	Post-consumer recovered wood
REFIT	Renewable energy feed-in tariff
RES	Renewable energy source
RWE	Roundwood equivalent
RWF	Recycled wood fibre
SE	Square edged
SEAI	Sustainable Energy Authority of Ireland
TJ	Terajoule
TPER	Total primary energy requirement
UB	Underbark
WBP	Wood-based panels
WBP SD	Sawdust produced during the sanding of wood-based panels

## Annex A: Detailed woodflow data for the island of Ireland (2007-2009)

### A1: Softwood fibre processed<sup>a</sup>.
